Hospitals Leading Health Care's Transformation

The 2010 Leadership Summit focuses on the organizational characteristics, structures, and processes that will lead to a high-performing system of care. The Summit highlights the most effective and efficient approaches for hospitals and health systems to integrate care and improve financial and clinical performance along the continuum of care.

The program features industry leaders addressing the critical issues of improved care coordination, strategies for delivering greater value while managing greater risk and accountability, new approaches to partnering, and the impact of emerging technologies on patient care and business practices. We'll also explore the leadership commitment needed to improve organizational performance, and assess new opportunities for engaging the workforce in the creation of workplace cultures that translate into a better experience for patients and staff alike.

Education Tracks:

- Improving Care Coordination
- Delivering and Demonstrating Greater Value
- Strategies for Managing Greater Risk and Accountability
- Emerging Partnership Models
- Implementing and Leveraging the Electronic Health Record
- Transforming the Workplace and the Workforce
