

2014 Demographics

Summary of Findings:

Data represents information reported by ASHHRA members in the 2014 Member Satisfaction Survey and the 2014 ASHHRA Conference Feedback Survey.

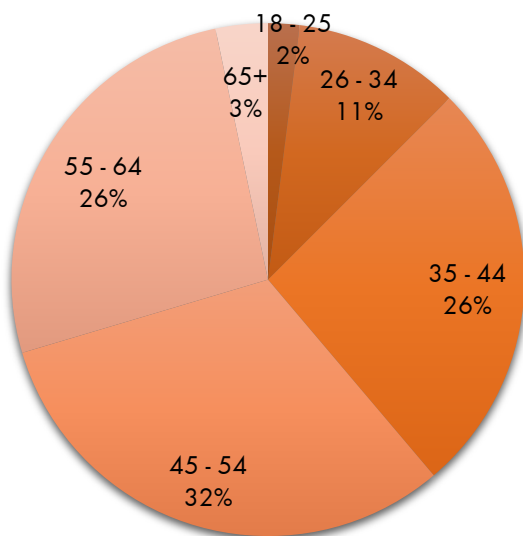

According to the data, the annual conference attendees are a good representation of the membership population.

Non-hospital facilities include clinics, long-term care, hospice, foundations, home health and any other facility that is separate from a hospital or health system.

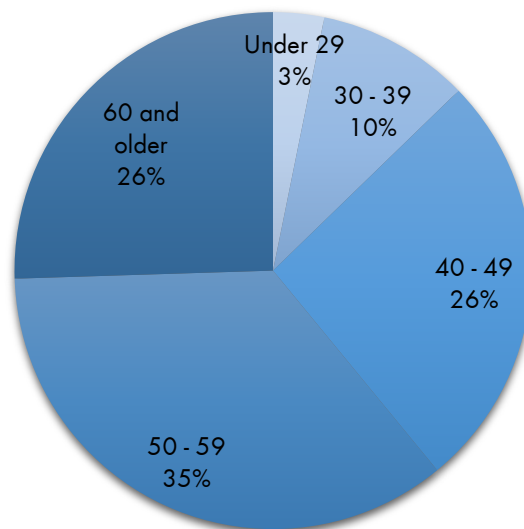

Since one to one comparisons could not be made on facility revenue, professional level, and function areas, some aspects of annual conference to general member comparisons could not be directly made and might be represented separately.

The following charts reflect statistics of self-reported demographics in the 2014 Member Satisfaction Survey and/or the 2014 ASHHRA Conference Feedback Survey.

2014 Conference Age Range

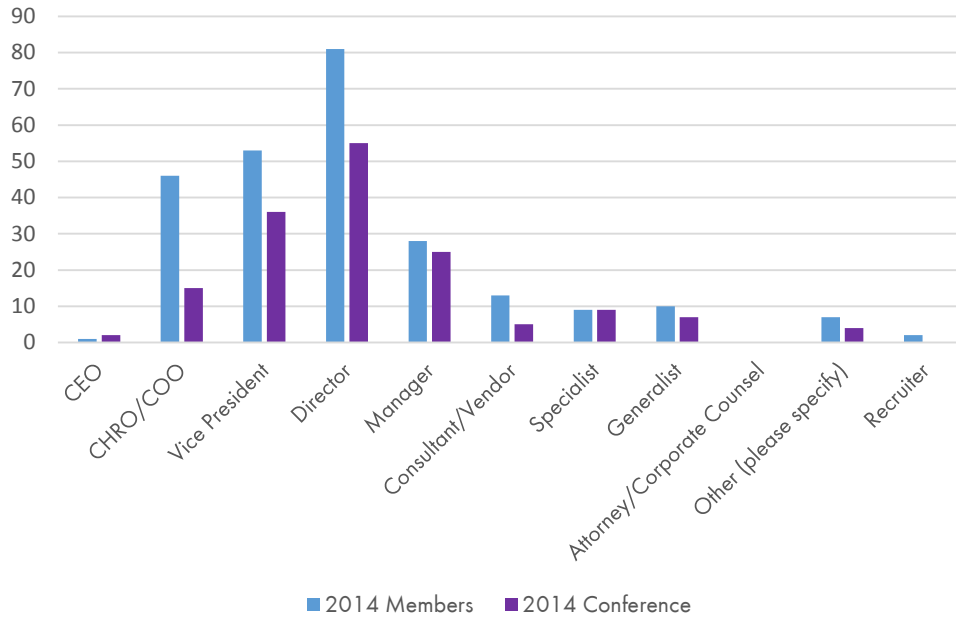

2014 Members Age Range

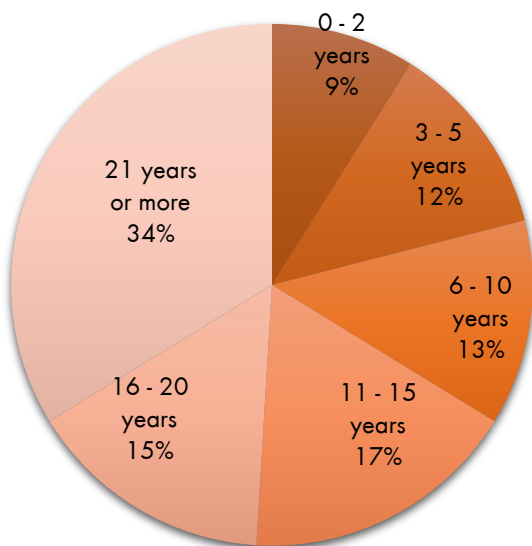

2014 Demographics

**What is your primary role in HR?
Select the professional level that best matches your
current responsibilities.**

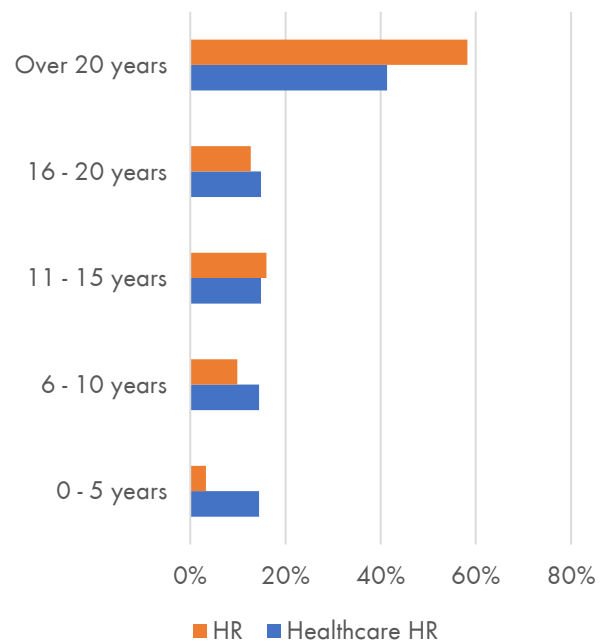

**Please indicate your number
of years of experience in
health care HR.**

2014 Conference

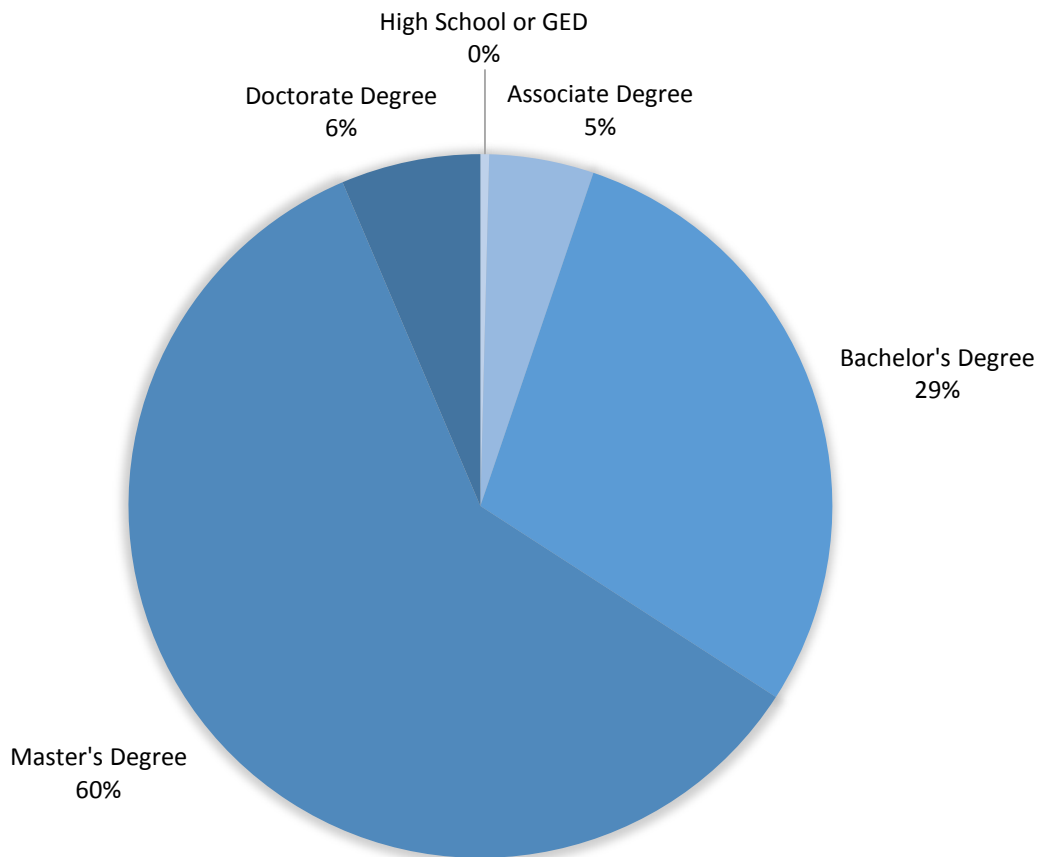

Years of experience.

2014 Demographics
